Art Unit: 1614

A 1449 form is used for the prior art cited.

Claims 1-149 are drawn to methods and compositions for treating neoplasia disorders in mammals employing an enhanced combination of a cyclooxygenase-2 inhibitor, a matrix metalloproteinase inhibitor and an antineoplastic agent. The specification on page 13, lines 13-15 states that the "inventions are administered in combination at a low dose, that is, a dose lower than has been conventionally used in clinical situations. Further, the antineoplastic agents are classified in both class 514 and class 424. For example, the antineoplastic agent, cisplatin is classified in class 424, subclass 649, the agent, doxorubicin is classified in class 514, subclass 34 and the agent paditaxel is classified in class 514, subclass 449.

Applicants are required to select a single enhanced combination of one cyclooxygenase-2 inhibitor, one matrix metalloproteinase inhibitor and ~~are~~ *one* antineoplastic agent for examination on the merits.

The several inventions above are independent and distinct, each from the other, as they have acquired a separate status in the art of treating as a separate subject matter for inventive effect and require independent searches. It is noted that a reference to one enhanced combination of drugs would not be a reference to another enhanced combination of drugs under 35 U.S.C. 103. Further, the claims read on a multitude of enhanced combinations of drugs which would require many field of searches that would be an undue burden on the Examiner. Therefore, restriction for examination purposes is proper.

Art Unit: 1614

Applicants are required to make a provisional election even though this requirement is traversed.
